

TANDEMBOX sink unit

the clever solution for the sink cabinet

PRODUCT
MEMO

blum

The Cleaning zone of the kitchen is rarely utilised efficiently, especially under the sink. Thanks to Blum, an innovative solution for the formerly „dead“ space has been created — the TANDEMBOX sink unit. This smart solution uses space directly below the sink for storage of dishwashing and cleaning items. With TANDEMBOX sink unit, you can make better and more intelligent use of valuable kitchen storage space under your sink.

Sink base unit

The Sink unit is best combined with a high-fronted pull-out underneath, which provides sufficient space for waste bins and further cleaning equipment. Inner drawer in the lower sink cabinet also provides additional organisation where you can store up scrubs, sponges, detergents and cleaning cloths.

First-rate quality of motion

The use of SERVO-DRIVE is a popular option for Sink-unit application, found in kitchens with or without handles. With SERVO-DRIVE a light touch on the front or a light pull of the handle opens your Sink unit with ease.

i

Technology that outperforms

Cleaning zone is where the sink and dishwasher are. It also contains household cleaners and cleaning utensils. Transform the unused space under the sink into a storage space using TANDEMBOX sink unit.

1

The Sink unit contains cleaning and dishwashing liquid/soap as well as tea towels, sponge and other cleaning utensils.

2

The sink base is where the rubbish/recycling containers are located. Cleaning materials are stored hygienically in the ORGA-LINE bottle holder and kept separate from the recycling/rubbish holders via a dividing wall.
