

# SERVO-DRIVE for BOX Systems

Fascinating opening, as if by itself

## Memo

Experience moving movements with SERVO-DRIVE

SERVO-DRIVE offers you full freedom of movement in your kitchen — with our without handles.

Even when your hands are full: With SERVO-DRIVE, you can open drawers with your foot, knee or hip.

Whether heavy or light, wide or narrow drawers — the gentle opening system always remains the same.

SERVO-DRIVE has an improved detection feature, ensuring that it recognises between when you are leaning on the front and when you actually want to open the front.

SERVO-DRIVE is the opening support system for drawers. A light touch on the front or a light pull of the handle, drawers will open effortlessly, regardless of where you touch the front. With the integrated BLUMOTION system, pull-outs will re-close silently and gracefully.

The drive unit is the heart of SERVO-DRIVE. It comes in only one version that can be used for all applications. Because the drive unit is self-adjusting, this guarantees smooth operation starting at 300 mm cabinet height.

### Advantages:

- Automatic opening with just a light touch or pull
- SERVO-DRIVE adds value to a new kitchen. It does not only fulfil high design standards, but also the demands for high freedom of motion.
- Easy assembly and cabling
- Maintenance-free.
- Easy to deactivate via a switch outlet
